**Abstract:** In this study we wanted to present the importance of Dendrological Parks in Timiș County, which can become points of attraction during this period, due to the species of exotic trees but also the history of the place. People visiting these parks must protect existing species and behave appropriately that does not pollute the environment.

- **Introduction**

From the specialty literature I have noticed that in the county Timiș more dendrological parks which are considered true monuments of nature, because they have many species of trees shrubs brought from other continents (Dendrological Bazoș Park), which can be noticed through flora and fauna like Dendrological Buziaș park.

- **Material and method**

Bazoș Dendrological Park is located in Bazoșu Nou village, Bucovăț commune in Timiș county, at a distance of 20 km southeast of Timișoara, and the other analyzed park is located in Buziaș, at a distance of 30 km from Timișoara.

- **Results and discussions**

In this study we have analyze the interest of the people for visiting these parks near Timisoara, what made them choose to visit and we were also interested of the fact that they understood that these parks have some extremely valuable species, unique in the world, and their behavior can have a negative impact on the environment.

- **Conclusions**

The majority of the respondents have chosen to visit these parks due to the beauty of the landscape and fewer due to the history of the place.

The respondents have considered that these parks are not being enough highlighted.

Some of the visitors were disturb mostly by the negative behavior of other visitors, understanding that the natural resources are limited.
